

Teaching Mathematics to middle school students

All our III B.Sc. Mathematics students, 58 in total taught Mathematics to their neighboring middle school students in their own village. Each student took Mathematics classes for 5 students. They took classes for them as their extension activity for the academic year 2016-2017. They conducted tests in the respected topics. Every student submitted their extension report in a notebook, enclosing test papers also. Nearly 235 school students were benefited through this extension work.
