Sri G.V.G. Visalakshi College For Women, (Autonomous)  
Udumalpet.

Department of Information Technology  
 Organizes Webinar  
 on  
 "Cyber Security Technology".

Date: 27/10/2023  
 Platform: Google meet. meet link:

The Department of Information Technology organized webinar on cyber security technology on 27.10.2023 through Google meet (online mode).

The poster for the webinar includes the following text: SRI G.V.G VISALAKSHI COLLEGE FOR WOMEN UDUMALPET, DEPARTMENT OF INFORMATION TECHNOLOGY, Organize a Webinar on CYBER SECURITY TECHNOLOGY, Resource Person: Mr. Shajith Navas, Technical Account Manager, Nextbridge IT Solutions, 27.10.2023, 2.00 PM, CONVENOR: MRS. L. SANKARA MAHESWARI, HOD - IT, CHIEF PATRON: DR. N. RAJESWARI, PRINCIPAL.

70

Opening remarks for the program was given by Mrs. L. Sankara Maheswari, Head & Assistant Professor, Department of Information Technology, 108 students attended the session and got benefited.

Resource person  
 Shajith Navas,  
 Technical Account Manager,  
 Next bridge IT Solutions

No of Beneficiaries : 108 students

Topics Covered:

- \* Introduction to Cyber Security world
- \* Different kinds of attacks in Today's IT world
- \* How Cyber Security is the solution to attacks
- \* Difference between Information security and Cyber Security
- \* Cybercrime statistics in India
- \* Factors affecting Cyber Security
- \* Threats and its types
- \* Online shopping, social media vulnerabilities and Mitigations.

71

### Why Cybersecurity?

Addresses business objectives and IT security interdependency

Focuses on organizational information security management

The world relies on technology more than ever before, and as a result digital data creation has surged.

### Threats and its types

- **What is a threat in Cyber Security?**  
 A cyber or cybersecurity threat is a malicious act that seeks to damage data, steal data, or disrupt digital life in general. Cyber threats include computer viruses, data breaches, Denial of Service (DoS) attacks, and other attack vectors.
- **What is a threat actor?**  
 Threat actors, also known as cyber threat actors or malicious actors, are individuals or groups that intentionally cause harm to digital devices or systems.
- **What is the role of threat actor?**  
 Threat actors exploit vulnerabilities in computer systems, networks, and software to perpetuate a variety of cyberattacks, including phishing, ransomware, and malware attacks.

**Common Sources of Cyber Threats**

- **Nation states** —Hostile countries can launch cyber attacks against local companies and institutions, aiming to interfere with communications, cause disorder, and inflict damage.
- **Criminal groups** - Organized groups of hackers aim to break into computing systems for economic benefit. These groups use phishing, spam, spyware and malware for extortion, theft of private information, and online scams.
- **Hackers** - Individual hackers target organizations using a variety of attack techniques. They are usually motivated by personal gain, revenge, financial gain, or political activity. Hackers often develop new threats, to advance their criminal ability and improve their personal standing in the hacker community.
- **Malicious insiders** - An employee who has legitimate access to company assets, and abuses their privileges to steal information or damage computing systems for economic or personal gain.
- **Insiders** may be employees, contractors, suppliers, or partners of the target organization. They can also be outsiders who have compromised a privileged account and are impersonating its owner.

### Threats and its types

#### Types of Cybersecurity Threats

**Malware Attacks:**

Malware is an abbreviation of 'malicious software', which includes viruses, worms, Trojans, spyware, and ransomware, and is the most common type of cyber threat. Malware infiltrates a system, usually via a link on an untrusted website or email or an unwanted software download. It deploys on the target system, collects sensitive data, manipulates and blocks access to network components, and may destroy data or shut down the system.

**Types of Malware Attacks:**

**Viruses** - A piece of code injects itself into an application. When the application runs, the malicious code executes.

**Worms** - Malware that exploits software vulnerabilities and backdoors to gain access to an operating system. Once installed in the network, the worm attacks such as distributed denial of service (DDoS).

**Trojans** - Malicious code or software that poses as an innocent program, hiding in apps, games or email attachments. An unsuspecting user downloads it to gain control of their device.

The screenshot shows a Zoom meeting interface. The main window displays a slide titled "Identity Management" with the text: "It enables the right users to access the right resources at the right time for the right reasons." Below the text is an illustration of a person at a computer. The meeting controls at the bottom show the time as 3:23 PM and the meeting ID as kvb-znga-app. A list of participants is visible on the right side of the screen.

S

The screenshot shows a web browser address bar with the URL "meet.google.com/kvb-znga-app". Below the address bar, there is a notification that says "To apply your updated settings to this site, reload this page" with a "Reload" button.

The screenshot shows a Zoom meeting interface. The main window displays two slides. The first slide is titled "Data Management" and contains the text "Data is the smallest piece of information in any form." It features a central diagram with four colored quadrants labeled "Text documents", "Images", "Audio clips", and "Software programs". The second slide is titled "Three Basic States of Data" and shows three icons representing "Data at rest", "Data in transit", and "Data in use". The meeting controls at the bottom show the time as 3:25 PM and the meeting ID as kvb-znga-app. A list of participants is visible on the right side of the screen.

### Key Takeaways

- Cybersecurity refers to a set of techniques used to protect the integrity of network programs, and data from attack, damage, and unauthorized access.
- Malware is a software that is designed to cause damage to a computer, server, client, or network. The types of malware include worm, spyware, virus, trojan, and logic bomb.
- Strategic plan, tactical plan, and operational plan are the types of security management plans.
- Change control is a systematic approach for managing all changes made to a product or system.
